Gripping romantic suspenseVon CiclochickThis is not a book to start reading if you have a busy day ahead of you ' you won't want to put it down!I was gripped from the start with the early introduction of a murdered woman, Tanya, who is

found by an ex Special Ops Marine soldier, Reed Adler, with a severely traumatised young boy by her side. While Reed tries to establish the boy's relationship to this woman and break through his barrier of silence, he has his own demons to face after serving in Afghanistan. Meanwhile, the dead woman's sister, Jenna, has to deal with her grief, intensified by the fact that when they last met 10 years previously, not only did they have a bitter confrontation, but it was to be the last time they saw each other. Her sister's murderers catch up with Jenna and fate unites her with the nephew she never knew existed and the man who found and looked after him. Reed, Jenna, his close Marine comrades and her nearest friends work together to find Tanya's murderers and uncover an unscrupulous, immoral and unethical operation by a deranged and delusional doctor scientist. Maggie tells a very good story: her style is easy, uncomplicated and very readable, her characters are well-conceived: the camaraderie between Reed and his ex-Marine associates is warming and his PTSD is particularly poignantly portrayed; it weighs heavily against the undeniable and inevitable attraction he feels for Jenna. Maggie depicts an evil villain with conviction; there is a perfect balance of action, tension and romance in this book. I thoroughly enjoyed it.

Kurzbeschreibung Children with no birth records and a soldier with PTSD together must define the value of human life. Jenna Mosier is on a mission to save her murdered sister's child. Estranged for ten years after a bitter fight, the trail is as cold as her dead sibling. The only glimmer of hope is the place her sister's body and a ten-year old boy were abandoned in the backyard of Reed Adler, retired Marine Special Ops. Working together, Jenna and Reed piece together a mystery involving missing children and biogenetics research...and find they have more than justice and revenge in common. But the closer they get to answers, and each other, the more deadly the game becomes. With their hearts and lives on the line, they must decide what they are willing to risk to save one young boy. This is the first book in a new suspense series where a group of former Marines become Shadow Finders. They help find those who have disappeared, have no identity, or are presumed dead. AUTHOR INTERVIEW ABOUT EXPENDABLE This is such a current topic, with all the biomedical research in the news today. What made you want to write this story? Several life events converged at once when I began writing this novel and they all ended up in the story in some strange, twisted way. My eldest son was serving his second tour of duty in Iraq. Though I prayed for his life, I was also deathly afraid he would come home at best a cynic and at worst with PTSD. I worked with Veterans with PTSD from the Vietnam War in and knew how difficult it could be. While my son was in Iraq, I was working at a medical research university that had special permission to do stem cell research. This was during a time when all the possible evils of stem cell research was in the news and there were reporters at the university hospitals regularly. I extrapolated those reports to create the biogenetic research extremes used in this novel. Putting those two elements together into a suspense novel seemed like a natural blending. I also leaned a little on my science fiction roots, though the science in this novel is not all that far away from reality. As with all technological and medical advances, the use of technology in itself is not bad. It is the people who wield the power with evil intent that make it bad. Let us all hope that in the future, this technology is used for curing illnesses and not for maximizing profits or gaining individual power while harming others.
